

Upgrading Your Whole Home Water Filter System

By now you may have noticed limescales building up in your kettle or affecting your water heater and broiler at home. This is an indication that you are using hard water and it is starting to get a little inconvenient for you and your family. Another sign that your current home filtration system needs to be replaced is the taste of the tap water you are drinking. A sodium-based filter can leave an unclean taste in your mouth which is unpleasant and can be unhealthy. Finally, if you shower or take a bath and feel like there's a layer of dirt left on your skin leaving you feeling unclean, it's really time to look into a new [whole house water filter](#) like the ones from Filtersmart.

Whole Home Water Filtration in a Nut Shell

Most homes today are still using the sodium-based filtration system which has been useful in the past. Today, there is a better and healthier option available on the market which does not use salt as part of its system. Instead, Filtersmart uses a coconut shell based carbon that is more effective than the latter. The new unique and effective system is National Sanitation Foundation (NSF) approved and can remove 99% of the chlorine found in tap water. There is no other filtrations system that is comparable to this one which can make regular tap water better than the expensive bottled water. When you choose to upgrade your filters you will enjoy tap water with undetectable levels of chlorine for up to 5 years. It's all clean and refreshing drinking and shower water.

System Features and Up Flow Design

Installing the carbon-based filter from Filtersmart is so quick and easy that anyone with basic plumbing skills can do the installation themselves. It's a simple in/out design that you will be reaping the benefits of the clean and filtered water for the whole house in no time. The filter is also very convenient and 100% maintenance free with a lifetime warranty for the tank and valves, it's a worry and hassle free filtration option. No electricity is required to run the filter and it's all natural coconut

shell carbon produces fresh spring-like water that still has the necessary natural minerals that purified water does not have.

A whole home water filter can give you clean and reliable drinking water while at the same time providing you with fresh water for baths and showers. The whole family can now enjoy refreshing water in every tap inside the house with just one simple installation. Don't let the old filter decrease your quality of living, make the upgrade now and taste the difference.
